The Similarity Report
The colour of the report icon indicates the similarity score of the paper, based on the amount of matching or similar text that was uncovered. The percentage range is 0% to 100%. The possible similarity indices are:

- **Blue**: No matching text
- **Green**: One word to 24% matching text
- **Yellow**: 25-49% matching text
- **Orange**: 50-74% matching text
- **Red**: 75-100% matching text

Click on the percentage to go to your Document Viewer and see your report.

Your Side Bar provides you with the source that they have found similar to the text within your document. The more similar sources found, the more colors you will see being matched with your content. All of the same coloured highlights is from the same source.

When “un-quoted” and properly cited content of the same color appears it is because of their **proximity** to each other and they are still considered to be similar to the original reference (eg: book, article etc.) as they are considered copied text with slight changes or additions of words in between.
Chapter 1 Introduction

Introduction

This chapter includes the background of the study, statement of research questions, definition of terms, significance of the study, limitations of the study and delimitations of the study.

Background of the study.

“Statistics is becoming such a necessary and important area of study” (Ben-Zvi & Garfield, 2008). The incorporation of statistics into most mathematics curriculum has necessitated two main goals for statistics education globally: the preparation of some students for further study of formal statistics and the preparation of all students to use statistics in their daily life.
The cover page contains the title of your document and your name, as well as submission details at the bottom of the page.

*Note: If you have previously submitted a draft of your paper to an opt-in account, the Submission ID is required so always remember to save a copy of the report or each submission ID no matter where you submit your documents.
The Originality Report should be included on the last page of your downloaded PDF report. Re-download the report if it does not appear.
Filtering your Similarity Report
To refine your similarity scores, consider the following Similarity Report filters:

**Exclude quotes and bibliography**
"Quotes" and bibliography items are widely reused and generally fail to demonstrate original writing. You may wish to exclude quotes, bibliographies, and items of a similar nature from influencing your students' similarity scores.

**Exclude small sources (measured by word number or percentage)**
You can exclude sources in the source list that are below the threshold set by you or your faculty. For example, if the threshold is set at 3%, any 1% or 2% match would be removed from the current report mode's source list (Match Overview or All Sources).

Filtering

Excluding Quotes and Bibliography

When you choose to exclude quotes, the Turnitin system will recognize quotes by the use of double quotation marks - "like this" - or paragraph indentations in a Microsoft Word® document. Single quotations - 'like these' - are not recognized as quotes.

When you choose to exclude bibliographies, our system will detect the following keywords and disregard matches in the paper after that point:

References
References cited
References and notes
Works cited
Bibliography
Resources

However, when the paper reaches the following words in the paper, it will resume the similarity check:

Appendix / Appendices
Glossary
Table / Tables
Acknowledgment / Acknowledgments
Exhibits
Figure / Figures
Chart / Charts

Filtering

You can exclude sources in the source list that are below the threshold set by you or your faculty.

You can exclude sources that are less than a certain number of words. For example, filtering by 10 words will exclude all sources that have a cumulative number of matching words that are less than 10 words in length.

OR

You can exclude sources that are less than a certain percentage of words. For example, if the threshold is set at 3%, any 1% or 2% match would be removed from the current report mode's source list (Match Overview or All Sources).
